Art Unit: 1746

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka et al. (U. S. Pat. No. 5,689,749).

Re claims 1 and 11 Tanaka is each cited disclosing an apparatus for dispensing a liquid onto a substrate, comprising:

a support (21 in Tanaka) for receiving the substrate;

a dispensing head (31, 23 in Tanaka) for dispensing the liquid onto substrate;

a knife-ring (24 in Tanaka, see fig. 15) having a base and a tapered edge

extending from said base, said knife ring being vertically adjustably mounted beneath said support; and

a plurality of independent actuated vertically adjustment mechanism (see col. 9, lines 15-27) that differs from the claims only in the recitation of the knife-ring being vertically adjustably mounted, via an automatic/hydraulic-powered adjustment mechanism. Nonetheless, to have the ring adjusted automatically, is deemed to be an obvious matter of design, in that it is old and well known to substitute automatic arrangement for manual arrangements (see MPEP 2144.04, **III. AUTOMATING A MANUAL ACTIVITY** In re Venner, 262 F.2d 91, 95, 120 USPQ 193, 194 (CCPA 1958) (Appellant argued that claims to a permanent mold casting apparatus for molding trunk pistons were allowable over the prior art because the claimed

Art Unit: 1746

invention combined "old permanent-mold structures together with a timer and solenoid which automatically actuates the known pressure valve system to release the inner core after a predetermined time has elapsed." The court held that broadly providing an automatic or mechanical means to replace a manual activity which accomplished the same result is not sufficient to distinguish over the prior art.). Re claim 2, to have the knife-ring adjusted by a fluid actuated cylinder, is deemed to be an obvious matter of design (see MPEP 2144.06 SUBSTITUTING EQUIVALENTS KNOWN FOR THE SAME PURPOSE). Re claims 3, 6, 8, 10, 12 and 14, no patentable distinction is deemed to exist between the widths as claimed, i.e., 290mm and the corresponding structure in the applied prior art. Re claims 4, 5, 7, 9 and 13, the applied prior art is cited as applied to the subject matter of claim 2 above.

3. Applicant's arguments with respect to claims 1-14 have been considered but are moot in view of the new ground(s) of rejection.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to FRANKIE L. STINSON whose telephone number is (572) 272-1308. The examiner can normally be reached on M-F from 5:30 am to 2:00 pm and some Saturdays from approximately 5:30 am to 11:30 am.
